

ALPSTAR Initial conference
27th and 28th October 2011
Chambéry, France

**Workshop session II : Energy scenarios for 2050: thinking ahead
in the Alpine regions**

Rhônealénergie Environnement : Laurent CHANUSSOT

Regional Climate Air Energy Plan (SRCAE) are important to :

- Strengthen the coherence of the territorial action by giving a strategic and forward-looking frame elaborated in the widest dialogue;
- Articulate the stakes and the regional and territorial objectives with the national and international commitments of France in the field of the air, of the energy and of the climate;
- Integrate the problems of the air, the climate and the energy, treated previously in a different way in separated documents (wind plan, regional plan air quality).

Such plan must be elaborate with the principles of the governance by assuring the representativeness of each following colleges: States, Local authorities, Employees, Companies, civil society (NGO Environmental, etc.).

Such plan constitute a strategic frame for local authorities and will have to facilitate and strengthen the regional coherence of the actions engaged by these local authorities.
